CSE 002: Fundamentals of Programming

Syllabus

Software is transforming the world, and software programming is becoming an essential part of many emerging careers. This class is an introduction to software programming designed especially for people who use computers, but have no programming experience. Using the Java programming language, we introduce students to the basics of software development, software problem solving, and, crucially, to the process of debugging.

Prerequisites:

None.

Meetings:

The class is divided into two sections, 110 and 111. Both sections will generally meet for lecture at Neville 2, Mondays and Wednesdays, from 11:10am to 12am. The class will also meet for hands on laboratory instruction at two different times on Fridays: Section 110 will meet Friday from 10:10am to 11am, and section 111 will meet Friday from 11:10am to 12pm. All labs will occur in Packard Lab 122 and 112, which together support one section.

Textbook:

The required text is <u>Introduction to Java Programming, 9th Ed.</u> (Comprehensive Version), by Y. Daniel Liang (2013, Pearson). It is available from the university and online bookstores.

<u>Use the earlier 8th edition at your own risk</u>. The earlier edition is very similar to the 9th edition, but the class does not make accommodations for people who elect to use the 8th edition. If you choose to use the 8th edition, it is up to you to find out if any differences will affect you (especially with regard to answering the right homework question) or if there are any errors in the edition. Other students have used this edition in the past, but it is not recommended.

Course Staff:

Professor: Dr. Brian Y. Chen (chen [at] cse.lehigh.edu)

Office Hours: Friday, 2:00-4:00 pm, Packard Lab 328

Email office hours: TBD

Adjunct Professor: Shahida Parvez (smp9 [at] lehigh.edu)

Office Hours: TBD, Packard Lab 112.

Email office hours: TBD

Teaching Assistant: Elizabeth Carter (eec209 [at] lehigh.edu)

Office Hours: TBD, 331 Packard Lab

Email office hours: TBD

Student Assistants:

Assistant	Email address	Office Hours	Email Office Hours
Steve Stinson	srs514 [at] lehigh.edu		
Seth Blumenthal	snb212 [at] lehigh.edu		
Flores, Thomas A.	taf313 [at] lehigh.edu		
Hassel, Erin E.	eeh213 [at] lehigh.edu		
Kurup, Malavika P.	mpk314 [at] lehigh.edu		
Welkie, Benjamin P.	bpw215 [at] lehigh.edu		
Swenson, James M.	jms216 [at] lehigh.edu		
Isburgh, Dane K.	dki216 [at] lehigh.edu		
Driscoll, Andres J.	ajd216 [at] lehigh.edu		
Xu, Aiwen	aix216 [at] lehigh.edu		
Gao, Yifei	yig216 [at] lehigh.edu		
Yisheng Tang	yit311 [at] lehigh.edu		
Lucien Knechtli	Irk214 [at] lehigh.edu		

All student graders will hold office hours in Packard Lab 112 or 122. <u>Get to know</u> <u>at least one grader well!</u> Almost every grader has taken CSE2 recently, and they know how the exams and homeworks are structured. They cannot give you answers, but they will make suggestions that will help you find the answer on your own.

Email Contact and Email Office hours:

Given the size and technical nature of the class, email questions from students can be caught by spam filters or even lost. We want to prevent that. In order to ensure that your emails are addressed, and addressed quickly, please follow these basic criteria:

- The subject of all emails must start with [CSE2]. All caps, square brackets.
- Paste the original homework question into the email, if your question is related to a certain homework question.

Paste the grader's comments, if your question is related to a grading situation.

It is also important to note that the course staff all have other responsibilities: the graders and TA are all students like you, the adjunct professor and the professor teach other courses, conduct research, and contribute to other administrative efforts at Lehigh. So it's natural to expect that responding to email may take time. However, so that you can get a rapid response, we will be keeping email office hours, during which we will be able to answer emails quickly. If you email the staff member that is on email office hours, expect a response during their email office hours, rather than the next day.

Office hours:

No amount of email can replace asking questions in person. Most CSE2 staff have office hours in Sunlab and Sandbox lab, so that you can work on your lab or homework and get help when you need it. Don't be afraid to bring your laptop.

Don't expect the staff to do the homework for you. You will get advice on how you might fix the problem, but the staff will not solve your problems, because the act of solving the problem is the experience that you need to enhance your skills as a programmer. To get the most out of the course staff, prepare ahead of time with detailed and specific questions to get the best possible information.

Grading:

Exams will be closed book and closed notes, and offline. Make up exams will be offered for qualified reasons only. If you are going to miss an exam because of an extraordinary but otherwise unqualified reason (suppose

Class Component	% of grade	
Final Exam	25%	
Hourly Exams	10% each	
Homework	20% total	
Labs	10% total	
Participation	15% total	

you won a Rhodes scholarship and you had to travel to receive a medal) you must notify the instructor well before the exam is given.

Attendance. Attendance is required, and will be factored into the participation component of the grade. Attendance will be evaluated on unannounced days by one of four methods: (a) the instructor's discretion, (b) a pop quiz, (c) a card-reader system that reads Lehigh student IDs (d) an unannounced sign in sheet. For this reason, it is essential to always bring your Lehigh ID to class. The evaluation of attendance may occur at any time.

Course Material. You are responsible for everything that occurs in lecture, in lab, as well as assigned readings in the book. This includes questions in related chapters of the book, unless explicitly stated.

Grade appeals. An appealed grade may be changed up to two weeks after an assignment or exam is returned. After the final exam, no grades may be contested.

Submitting Homework. For each programming assignment you will hand in an electronic copy using an on-line file-transfer procedure which will be explained in class. The electronic copy will be automatically collected at 11:00 PM the day it is due unless I state otherwise. **Absolutely no exceptions will be made for the strict collection of homework at 11pm, <u>ever</u>. This strict deadline enables the course to be fair to all students, and for homework to be returned early enough for you to use the feedback to prepare for exams.**

Homework Grading. Each assignment will be graded on a 100-point scale. Your grade on assignments will be reduced 10 points for being 24 hours late, and an additional 10 points for being 48 hours late. Homework will not be collected after 48 hours. **Homeworks that are not collected will receive a zero.**

Homework, when assigned as sets of problems, will be graded with some degree of partial credit, depending on the complexity of specific questions.

Most homework will be composed of programming assignments. Here are some guidelines that we will use when grading your programs. The percentage of each category may change with each programming assignment, depending on the emphasis of the assignment.

- The code will compile without errors (10%)
- The code runs correctly (40%), meaning that it produces correct output when given correct input; also handles incorrect input well: e.g., detects it and returns an error.
- Good Programming Style (40%)
 - Written top-down, i.e., modularized
 - Avoids repetitive code
 - No glaring inefficiencies
 - Uses data structures as specified in program description
 - Informative output
 - Output well formatted
 - Uses style indicated by instructor.
- Good documentation (10%)
 - Helpful, mnemonic choice of identifiers
 - Explanation of overall purpose of the program
 - Sketch of the purpose and algorithm of each method
 - State Pre and Post conditions for each method

Avoid excessive use of comments

Exam grading. Exams will require you to write code on paper. Naturally, this is an imperfect effort without the corrective support of a compiler, and for students new to programming this is like typing in a foreign language without a spell checker. Nevertheless, two very different kinds of errors get made:

Conceptual errors.

In these cases, the student does not understand how to solve the problem, or attempts to solve the problem in a way that could not work even if the code that was written had no errors. Just like "banana" plus "35" is not equal to "true", or like the wrong directions on a map will never get you to a desired destination, conceptual errors indicate an incomplete understanding of the course concepts. Conceptual errors thus receive partial credit based on how complete or incomplete the student's understanding appears, from the response to the question alone.

Errors in syntax

Just like natural languages, programming languages have very well defined syntactic rules. Small syntactic errors (like matching braces and missing semicolons) that would cause code to not compile will not generally lead to large losses of credit when the intended meaning of the code is unambiguously correct at a conceptual level. If your syntactic error indicates a significant lack of understanding of the syntax (for example, repeated syntactic errors of the same kind) or may be interpreted in multiple fashions, it may lose substantial credit.

Overall grades. The course will be graded on a curve that will be determined strictly after the final exam. Midterm grade estimates will be provided for all students. Histograms of exam scores will be provided on a per-question basis to give a very clear picture of student standing relative to the entire class.

Topics to be covered:

Introduction to Computers, Programming, and Java; Elementary Programming; Selections; Loops; Methods; Single-Dimensional Arrays; Multidimensional Arrays; Introduction to Objects and Classes.

Testing Facilities: the Sandbox Lab and the Sun Lab

While you may develop your programs anywhere you have a Java compiler, they will be tested using the CSE Sun Workstations running Solaris. These facilities will also be used for our labs. The labs are open six days a week (see the lab monitor schedule for exact times) so you can work here outside of class. However, you'll also have to avoid coming during times that the sandbox and sunlab labs are used for classes.

On CSE2 and learning computer programming:

This early class on computer programming is designed for people with **absolutely no experience** on the topic. Computer programming is a skill, and in that regard no amount of prescribed coursework can assure your mastery of the topic: No amount of powerpoint slides could ensure that you never fall down the first time you try to ride a bicycle. No amount of homework in physics could guarantee that you never miss a free throw in basketball. And in the same regard, no amount of lectures and homework can assure that you can program software that you have never programmed before.

Yet that is what you will do in this class. Homeworks, labs, and exams will all challenge you to use aspects of the Java language that you have never used before, and to solve problems that you have not confronted before. Just like the first time you tried to ride a bike, shoot a basketball, ride a snowboard, or play an instrument, you will make mistakes. That is normal, and it happens to everyone: don't fall into the trap of thinking that you are "just not good at computer science".

On homeworks and labs, you will make mistakes until you eventually solve the problem. But on exams, you will face new problems, you will have only a limited amount of time and you will not have the corrective support of the compiler. Just like learning to ski one slope does not necessarily prepare you for another slope of equal difficulty, you cannot prepare for the exams by simply doing the homework and labs. Just like you wouldn't consider yourself a perfect basketball shooter after you scored your first free throw, you must continue to practice. Every time you solve a problem, spend more time to figure out why your solution worked, and why your other solutions did not. Habits like these are crucial for success.

"I've missed more than 9000 shots in my career. I've lost almost 300 games. 26 times, I've been trusted to take the game-winning shot and missed. I've failed over and over and over again in my life. And that is why I succeed." – **Michael Jordan**

CSE2 CourseSite

CourseSite will be used as a repository for class announcements, lecture slides, homeworks, labs, and grades. There will also be surveys, forums, and other interactive content that you can use to interact with other students.

CSE2 DropBox

As a convenience to you, a CSE2 Dropbox will be shared with you that will contain the latest version of all homeworks and labs. You'll never have to log into courseSite (which can be slow), because everything will already be on your dropbox folder, if you have an internet connection.

Policy on Academic Integrity and Collaboration

All work, unless explicitly stated in the problem definition, is to be an individual effort. You are encouraged to discuss assignments with one another, your friends, and with the instructors and graders of the course. Indeed, this may be the most effective method of learning. You may share concepts, approaches and strategies for producing a solution, **BUT YOU MAY NOT SHARE CODE**. All work submitted in your name must be your own. If necessary, violations will be considered as cases of academic dishonesty.

Policy on Disabilities

If you have a disability for which you are or may be requesting accommodations, please contact both your instructor and the Office of Academic Support Services, University Center C212 (610-758-4152) as early as possible in the semester. You must have documentation from the Academic Support Services office before accommodations can be granted.
