

Roger N. Nagel  
Major Accomplishments

1. Appointed in June of 2003 as the Senior Fellow for Creative Programs in the P.C. Rosin College of Engineering. Responsibilities include facilitating the creation of new academic programs such as a minor in engineering for non-engineers, and chairing various faculty committees.
2. Appointed in May of 2000 by the commerce department as the academic representative on the United States steering committee for intelligent Manufacturing Systems (IMS). In this capacity I am one of three senior US executives, one from Industry and one from government to represent the United States in collaboration with Australia, Canada, Europe, and Japan on cooperative research projects in IMS.
3. Appointed January 1, 1999 as a Senior Fellow in the Enterprise Systems Center, to serve as a source of innovation with students in the development of a Collaboratory a new concept for interactive learning between and amongst faculty and students. Also serve as an advisor to the executive director, developing strategic options for the Center. Beginning research to better understand the collaborative principles fundamental to building value circle relationships in and across industry, academia, government and internationally. Examples include a recently developed partnership for excellence program in industry, and the exploration of potential collaborative relationships with Chinese professors and industry in manufacturing collaboration between Chinese and American firms, professors and students.
4. Appointed In 1995 as CEO/Executive Director of the Iacocca Institute and as an executive officer of Lehigh University. Responsible for the internal operations of the Institute and to provide leadership and direction to the CEO's of four Lehigh University member corporations involved in economic development. A member of the board of directors of each corporation, worked with the Lehigh trustee oversight committee on corporate governance and oversight. As the CEO of the Iacocca Institute, reported to the President of Lehigh University and served as one of his advisors on revenue generation, economic development, industrial partnerships, the globalization of Lehigh University. Initiated programs to partner with industry on global competitiveness, executive education and leadership development. The Iacocca Institute provided assistance to and developed joint projects with more than one hundred small and medium sized firms each year to help increase their effectiveness and competitiveness.

Guided the Institute, as it became a gathering place for executives from across the world to formulate and share ideas. Signed cooperative agreements with partnering institutes in Europe, Asia and Latin America. Led the Institute in developing and enhancing the Iacocca Scholars program, bringing executives to campus for seminars, workshops, and in creating the Crossroads of Knowledge program. Focused on making a real and positive impact on students, using hands on experienced based learning approach to cause students at all levels from undergraduate to executives to invent solutions that will work. Motivated by the thrill of interactions with these students and the opportunity to learn from them. Enjoy being a Socratic teacher and mentor.

Interacted regularly with Lee Iacocca chairman of the Iacocca Institute advisory board, and fifteen other CEO's in reviewing Institute goals and programs and in setting strategy for the Institute. By 1998 the Institute grew its annual contracts and grant revenue to twenty five million dollars.

Roger N. Nagel  
Major Accomplishments

5. As CEO of the Institute, led the team that created and implemented the Global Village for Future leaders of Business and Industry, in 1997. The global village is an innovative summer program designed to build 21<sup>st</sup> century global business leaders through goal directed experienced based learning. The state of the art program focuses on three areas: (1) Interdisciplinary, multicultural team building skills; (2) Leadership and Entrepreneurial skills; and (3) the development of an understanding of global business concepts as they differ from those of the late 20<sup>th</sup> century. In the first pilot year, 1997 52 Iacocca Interns were selected to participate representing 26 countries. All of the participants in the pilot program, which serves as an experiment in 21<sup>st</sup> century learning techniques, said they valued it highly and more than 90 percent said it "changed their lives". So did most of the over one hundred global business executives who participated in the program. The executives were asked to share their ideas and concepts for leadership and success, as part of the hands on experience sharing in the program. Personal relationships, helping others and sharing are core elements of the unique global village experience. In 1998, the second pilot year of the Global Village 56 participants attended from 26 countries with even better results. The global village experience goals, objectives and detailed results analysis are documented in a special report of the Iacocca Institute.
6. From 1988-1995 was actively involved in the Iacocca Institute concept starting in 1988 as an active member of the team, which recruited Lee Iacocca and co-authored the proposal to create the Iacocca Institute as a national resource on global competitiveness for Industry and for the students and faculty at Lehigh. In 1989, served, as the Operations Director years and then in 1993 became the Deputy Director of the Iacocca Institute. As deputy director, led the Institute team that produced the "21<sup>st</sup> Century Manufacturing Enterprise Strategy," with more than thirty thousand copies in circulation.
7. Co-author of three successful books. The two business books "Agile Competitors and Virtual Organizations: Strategies for Enriching the Customer," and "Cooperate To Compete: Building Agile Business Relationships." have been widely accepted. These two books are available in multiple languages, have won awards, and are used as the source of global competitiveness strategies. The third book on Robotics is still today a successful textbook almost ten years after its first publication.
8. Frequently present and share key ideas with senior executives in a broad variety of fields. This ongoing professional activity is undertaken to maintain and share an understanding of the key issues facing industry in the transition to 21<sup>st</sup> century competition. Each interaction is unique and different part of a formal or informal gathering of executives. Some sessions involve active consulting, plant visits or workshops, while others are invited lecturers or presentations with interactive Q/A sessions. Typically twenty or more sessions have occurred in each of the last ten years. For example in 1998-99 such sessions took place at or involved executives involved with the Emory University Executive program, Northern Ireland Electric company, Delphi interiors, Alpha Laval worldwide manufacturing, the Process Equipment Manufacturers Association, Association of Textile Machinery, the Danish Manufacturing Association, the Logistics Forum, the Human Resources Forum, Nutratech, Procure, GMA, the Tool Town Foundation, the Window & Door Association, the Laboratory Products Association, the Professional Builders Association, Euroventure, Armstrong World industries, General Motors,

Major Accomplishments

the Smithsonian Museum Information Technology Awards program, Team Pennsylvania, PenDOT, the Agility Forum, and the Discovery Center..

9. Cited by BusinessWeek in an International cover story as one of three "fathers" of the Virtual Corporation concept, have been invited to go around the world advising government and industrial leaders on the effective use of this innovative organizational mechanism. Served as an advisor to President Clinton's New Economic Council, as well as Government ministers and industrial leaders in Asia, Europe, Latin America and the United States.
10. Extended the work on the effective use of the virtual organization concepts, by focusing on the way to get organizations prepared to use the concept. In a pilot program funded by the US government for two million dollars over three years, was a key member of the facilitating staff, and an advisor to the nineteen CEO's whose companies participated in the Agile WEB of Pennsylvania. This group of companies worked for three years to be able to work quickly and easily together when the opportunity arises. The pilot program identified new techniques for building trust, sharing information and establishing a common set of values, ethics and expectations between companies who want to work together.
11. Selected in 1992 the commerce Department to be a member and then Chairman of a United States Technical Committee negotiating the feasibility of sharing Intelligent Manufacturing Systems (IMS) across the world. Represented our country for three years in the IMS feasibility negotiations with delegations from Europe, Japan, Canada and Australia. Responsible for organizing and conducting real experiments with real and valued results which involved shared manufacturing expertise across at least two continents. More than fifty firms participated in seven test cases involving all five regions. The feasibility program was deemed to be a success by all of the governments involved and a formal follow program was launched.
12. In 1991 selected by DOD executives to be the leader/ facilitator of a team of Industrial executives who created the "21<sup>st</sup> Century Enterprise Strategy". The United States Government commissioned this visionary report for the Congress of the United States. Its goal to show the path that would allow American based global manufacturing to return to a position of leadership on the competitiveness stage. The report introduced the concepts of agile competitors and virtual organizations and is accepted around the world as a key enabler of the competitiveness transition we are now experiencing. More than thirty thousand copies of the report are in circulation. As a result of this work was invited to testify before congress on multiple occasions and to advise government leaders on the rapid spread and deployment of the Agility vision. Lehigh received a twenty million dollar grant over five years to create a small organization led by industry, which would advise the government and assist industry in the deployment of agility strategies. As of 1999 Agility is a strategic objective of major corporations around the world. Agility research is ongoing in major universities across the globe. For example in an April 1999 gathering of European and American leaders in global manufacturing involving University and industry leaders. The heads of the European and American delegation requested an update of his view of the original "21st Century Manufacturing Report". More than half of the speakers attending this important meeting talked of the need for agility more experience in using virtual organizations
13. Honored In 1987Lehigh with an Endowed Chair, selected to receive a lifetime appointment as the Harvey Wagner Professor of manufacturing Systems Engineering. The chair appointment

Major Accomplishments

was made in recognition of accomplishments as a member of the National Academy of Sciences Manufacturing Studies Board, the leadership role in creating the award winning Manufacturing Systems Engineering program.

14. From 1982 until 1989 served as advisor to more than twenty-five MS students and four Ph.D. students. Also led a variety of faculty teams and conducted collaborative research projects with industry. Was the principle investigator on more than ten million dollars in contracts and grants, and led the faculty team implementing the interdisciplinary Manufacturing Systems Engineering (MSE) Program. This innovative program involved faculty from seven departments in two colleges. The program was initially funded by an award from IBM of two million dollars and won an award in 1985 for the best faculty team implementing and teaching computer integrated manufacturing. Also served as the founding director of the Institute for Robotics, and the Intelligent Systems Laboratory, and served as the director of the Center for Design and Manufacturing innovation (CDMI).
15. 1981 was a founding member of the Robotics International Society and chairman of the research group.
16. Was selected in 1980 meeting at the National Academy of Sciences, to be the leader of the United States team, which developed the IGES standard for the exchange of CAD/CAM data. In this role with two colleagues from Boeing and GE was responsible for building consensus amongst forty companies in three months. Provided technical expertise, leadership and facilitating skills. The IGES organization that we started in 1980 continued to facilitate collaboration across industrial firms for more than a decade. . The IGES organization then evolved into the IGES/PDES organization and finally adopted the role as American home for the international work on STEP. This pioneering work was recognized by several professional societies who presented a variety of awards over the next fifteen years. These awards include the "Jacquard Award" and a special ceremony at Autofact, and others.
17. Was a key leader and member of the scientific team developing the Factory Hierarchical Control system in the Robotics group at the national Bureau of Standards (NBS) now NIST. The work on Hierarchical control systems along with James Albus and Tony Barbera and Gordon Vanderbrug has been the basis of hundreds of computer based control systems for automation over the last twenty years. The research directions started in 1979 and 1980 at the NBS were continued for most of the next fifteen years. Serves as a technical advisor and consultant to the Manufacturing Engineering Laboratory and many of its division chiefs still today in 1999.
18. Was a Senior Staff Fellow at NIH beginning in 1995. Developed a patent on an imaging invention of that time and pioneered some of the early software for CAT scanner analysis. Invented 3D visual simulation techniques for medical applications in the National Institute of Dental Health. This technique was later used in NIST as a means of visualizing small changes in the molecular measuring machine project.
19. During the years from 1969-1976 served as an Instructor in the Computer Science Department, at the University of Maryland, a Consultant to Earth Satellite Corporation was a principle in a software development business. Also worked as a full time Ph.D. student. Earned a Ph.D. in Computer Science in January of 1976. Had research support while at the University from a

former employer and various federal agencies, with a research focus on computer animation, Image processing and Artificial Intelligence.

20. 1968 was one of three key professionals on the team at MAGI which created the three dimensional modeling package used by private and commercial CAD/CAM systems like CADAM Solids over the next 25 years
21. 1966 was responsible for developing and writing systems software for the Apollo Mission Simulators. In this capacity led a team of five systems programmers in creating shared memory code for multiple machines and supporting the simulation programs used by NASA for Astronaut training.
